

EXPRESSION OF INTEREST (EOI)

Title of Consulting Service: Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta Application (Data optimization, networking and server management, web map services, hosting live system and system support)

Method of Consulting Service: National

Project Name : Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta Application (Data optimization, networking and server management, web map services, hosting live system and system support)

EOI : SD/CS/QCBS/2080/81/01

Office Name: Survey Department

Office Address: Minbhawan Kathmandu Kathmandu

Funding agency : Government Budget

Abbreviations

CV	-	Curriculum Vitae
DO	-	Development Partner
EA	-	Executive Agency
EOI	-	Expression of Interest
GON	-	Government of Nepal
PAN	-	Permanent Account Number
PPA	-	Public Procurement Act
PPR	-	Public Procurement Regulation
TOR	-	Terms of Reference
VAT	-	Value Added Tax

Section IV.	D. Evaluation of Consultant's EOI Application	34
Section V.	E. EOI Forms and Formats	38

A. Request for Expression of Interest

Request for Expression of Interest

Government of Nepal (GoN)

Name of Employer: Survey Department

Date: 16-05-2024 00:00

Name of Project: Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta Application (Data optimization, networking and server management, web map services, hosting live system and system support)

1. Government of Nepal (GoN) has allocated fund toward the cost of Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta Application (Data optimization, networking and server management, web map services, hosting live system and system support) and intend to apply portion of this fund to eligible payments under the Contract for which this Expression of Interest is invited for National consulting service
2. The Survey Department now invites Expression of Interest (EOI) from eligible consulting firms (“consultant”) to provide the following consulting services: Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta Application (Data optimization, networking and server management, web map services, hosting live system and system support)
3. Interested eligible consultants may obtain further information and EOI document free of cost at the address Survey Department, Survey Department Minbhawan, Kathmandu. during office hours on or before 31-05-2024 12:00 or visit e-GP system www.bolpatra.gov.np/egp or visit the client’s website
4. Consultants may associate with other consultants to enhance their qualifications.
5. Expressions of interest shall be delivered online through e-GP system www.bolpatra.gov.np/egp on or before 31-05-2024 12:00
6. In case the last date of obtaining and submission of the EOI documents happens to be a holiday, the next working day will be deemed as the due date but the time will be the same as stipulated.
7. EOI will be assessed based on Qualification 39.0 %, Experience 46.0 %, and Capacity 15.0 % of consulting firm and key personnel. Based on evaluation of EOI, only shortlisted firms will be invited to submit technical and financial proposal through a request for proposal.
8. Minimum score to pass the EOI is 60

B. Instructions for Submission of Expression of Interest

Instructions for Submission of Expression of Interest

1. Expression of Interest may be submitted by a sole firm or a joint venture of consulting firms and the maximum number of partners in JV shall be limited to three.
2. Interested consultants must provide information indicating that they are qualified to perform the services (descriptions, organization and employee and of the firm or company, description of assignments of similar nature completed in the last 7 years and their location, experience in similar conditions, general qualifications and the key personnel to be involved in the proposed assignment).
3. This expression of interest is open to all eligible consulting firm/person/ company/ organization.
4. In case, the applicant is individual consultant, details of similar assignment experience, their location in the previous 4 years and audited balance sheet and bio data shall be considered for evaluation.
5. The assignment has been scheduled for a period of 15 Months. Expected date of commencement of the assignment is 25-08-2024.
6. A Consultant will be selected in accordance with the QCBS method.
7. Expression of Interest should contain following information:
 - (i) A covering letter addressed to the representative of the client on the official letter head of company duly signed by authorized signatory.
 - (ii) Applicants shall provide the following information in the respective formats given in the EOI document:
 - EOI Form: Letter of Application (Form 1)
 - EOI Form: Applicant's Information (Form 2)
 - EOI Form: Work Experience Details (Form 3(A), 3(B) & 3(C))
 - EOI Form: Capacity Details (Form 4)
 - EOI Form: Key Experts List (form 5).
8. Applicants may submit additional information with their application but shortlisting will be based on the evaluation of information requested and included in the formats provided in the EOI document.
9. The Expression of Interest (EOI) document must be duly completed and submitted by electronically only using the forms and instructions provided by the system.
10. The completed EOI document must be submitted on or before the date and address mentioned in the "Request for Expression of Interest". In case the submission falls on public holiday the submission can be made on the next working day. Any EOI Document received after the closing time for submission of proposals shall not be considered for evaluation.

C. Objective of Consultancy Services or Brief TOR

Terms of Reference

(TOR)

Terms of Reference for Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta” Application (Data optimization, networking and server management, web map services, hosting live system and system support).

Terms of Reference (ToR)

Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta” Application (Data optimization, networking and server management, web map services, hosting live system and system support).

1 Background

Survey Department, the National Mapping Organization also works as national cadastral organization. Department has district survey offices in all the districts which work for cadastral survey and land administration services. Cadastral survey of all the country has been finished and also the department has started re-survey from some of the district survey offices. During the time, till date, department has also prepared the digital cadastral data of all the districts generated from the paper maps by digitizing it. At this stage, more than 100 district survey offices are providing digital cadastral service on the basis of the digitized cadastral data.

Survey Department has developed two systems for cadastral services. For data acquisition, Parcel Editor is being used and for service deliver, Spatial Application Extension (SAEx) is being used. Both of these software are based on Arc GIS platform. Hence for the data preparation from Parcel Editor and service delivery from the SAEx, every survey office has its separate database maintained in their own server. This has increased the workload for the offices in maintaining the infrastructure as well. To minimise all of these shortcomings and store the data in central server and provide the service from the server based application, Survey Department has recently developed open source based Nepal Land Information System (NeLIS) and to provide the online service “MeroKitta” system has been developed. In the fiscal year 2079/80, the system has been implemented in 58 district survey office and it is planned to implement in 72 next offices.

For this system, central server has been established in Survey Department and a backup server has been established in Government Integrated Data Center “GIDC”. Here, both database server and application server is maintained. The district offices access the database at this server from the application set up in the server. Thus, all the data of the district offices are stored securely at the center. This eliminates the workload of maintaining the infrastructure individually at the district office and data from all the offices are integrated at the central server.

2 Objectives

The objectives of the NeLIS implementation are:

1. Creation of nation-wide seamless cadastral database that is stored centrally
2. Configure central database and application server to establish client server architecture for service delivery from district offices through centrally stored database and application
3. Establish intranet connectivity with Survey Office and Central server system with all necessary configurations and
4. Run the NeLIS and MeroKitta system live from the survey offices.

3 Scope of the work

3.1 Network and Server management:

3.1.1 Networking Equipment Installation:

The consultant is tasked with supplying, delivering, and installing Networking Equipment in all Survey Offices where NeLIS is being deployed. The consultant is required to furnish the specified equipment, including,

- a. A Router,
- b. LAN switch, and
- c. LAN networking components,
 - i. Network Rack with Cable manager
 - ii. Power Distribution Unit
 - iii. Networking Point
 - iv. Patch panel
 - v. Patch Chord
 - vi. Electric Cables, RJ 45, Ethernet Cable- Cat6, Listi and all other required accessories to accomplish LAN Networking.

along with the installation services for these items at each survey office. The consultant is expected to adhere to the provided specifications for the equipment.

i. Technical Specifications for Branch Router

Particulars	Requirements
Certification	ISO / CE
RAM	1GB or more
Ports	2x Gigabit WAN port and 4x Gigabit LAN Ports.
Features	● Routing Information Protocol Versions 1 and 2 (RIPv1 and RIPv2) ● Generic Routing Encapsulation (GRE) with dynamic routing protocol (e.g OSPF). ● Standard 802.1d Spanning Tree Protocol ● Layer 2 Tunneling Protocol (L2TP) ● L2TP Version 3 (L2TPv3) ● Network Address Translation (NAT) ● Dynamic Host Configuration Protocol (DHCP) server, relay, and client ● Dynamic DNS ● DNS Proxy and DNS Spoofing ● Access Control Lists (ACLs) ● IPv4 and IPv6 multicast ● Open Shortest Path First (OSPF) ● Border Gateway Protocol (BGP) ● Virtual Route Forwarding (VRF) Lite

Particulars	Requirements
Security Feature	● Secure Sockets Layer (SSL) VPN for secure remote access ● Hardware-accelerated DES, 3DES, AES 128, AES 192, and AES 256 ● Public-Key-Infrastructure (PKI) support ● IPsec tunnels ● VRF-aware IPsec ● IPsec over IPv6 ● Advanced application inspection and control ● HTTPS, FTP, and Telnet Authentication Proxy ● Dynamic and static port security ● Control plane policing ● Flexible packet matching ● Network foundation protection
Warranty and Support	Minimum 1 year with Parts replacement and service.
Installation and Configuration	The contractor need to perform all necessary tasks including but not limited to Installation, configuration and support up to warranty periods.
Accessories	All related Accessories should be supplied
Qualification	The proposed appliance Original Equipment Manufacturer (OEM) should be Leader in Gartner Magic Quadrant for wired and Wireless LAN Infrastructure for last 2 years.
Service Tag	Should be provided at the time of delivery.

ii. Technical Specifications for LAN Switch

Particulars	Requirements
Certification	ISO / CE
Ports	Gigabit RJ45 Port (ports as required by the survey office) + minimum 2x combo Gigabit SFP Port.
Switching Capacity	54Gbps
Forwarding Performance (64 Byte packet size)	40Mpps
Management	Secure Socket Shell (SSH), HTTPS, Simple Network Management Protocol version 3 (SNMPv3)
Features	Advanced defense mechanisms, including Dynamic ARP Inspection (DAI), IP Source Guard, and Dynamic Host Configuration Protocol (DHCP) snooping, detect and block deliberate network attacks. Combinations of these protocols are also referred to as IPMB (IP-MAC-port binding). ● DOS (denial-of-service) attack prevention maximizes network uptime in the presence of an attack

Particulars	Requirements
	• Protection of management sessions using Radius, TACACS+ and local database authentication as well as secure management sessions over SSL, SSH, and SNMPv3. • Support for advanced network security applications such as IEEE 802.1X port security to tightly limit access to specific segments of your network. Web based authentication provides a consistent interface to authenticate all types of host devices and operating systems, without the complexity of deploying IEEE 802.1X clients on each endpoint. Time based ACLs and Port Operation restrict access to the network during predesignated times, such as business hours.
Warranty and Support	Minimum 1 year with Parts replacement and service.
Installation and Configuration	The contractor need to perform all necessary tasks including but not limited to Installation, configuration and support up to warranty periods.
Accessories	All related Accessories should be supplied
Qualification	The proposed appliance OEM should be Leader in Gartner Magic Quadrant for wired and Wireless LAN Infrastructure for last 2 years.
Service Tag	Should be provided at the time of delivery.

iii. Technical Specifications for LAN Networking

Particulars	Requirements
Network Rack with cable manager	9U
Networking Point	Approx. 15
Patch Panel	Port Patch panel loaded keystone jack as required per switch ports.
Patch Chord	0.5m and 5m Cat6 Ethernet Patch chord as per office requirement
Power Distribution Unit (PDU)	Universal PDU for LAN Switch
Other Accessories	Electrical cables, RJ 45, Ethernet Cable Cat6, Listi and all other required accessories to accomplish LAN Networking.
Warranty, Support and Installation	The contractor needs to perform all necessary tasks including but not limited to Installation, configuration and support up to warranty periods.

Particulars	Requirements
	Minimum 1 year with Parts replacement and service at Survey Offices

3.1.2 Networking configuration:

The consultant is responsible for configuration of LAN according to guidelines provided by the department, ensuring that all the computers in the LAN are within the department's intranet network. Connection between the survey office and central server through intranet must be established prior moving forward to further steps.

3.1.3 Server configuration

The consultant is responsible establishing the database server and application server procured by Survey Department at the Government Integrated Data Center along with the backup at Survey Department. All the servers, router, switch, storage device and firewall need to be established and configured. The consultant is also solely responsible for the maintenance and regular network support throughout the contract. After the completion of network configuration, a report must be submitted with a detailed floor plan of computers and their respective IP addresses.

Note: The guideline/convention regarding the network setup will be provided by the department.

3.2 Data cleaning for NeLIS and MeroKitta implementation.

3.2.1 File Management

The existing cadastral data in survey offices are stored in a local server in a file based system. The files are accessed by system users within the office LAN using Windows file explorer. The stored files do not have existing standard folder organization and naming convention. The first and foremost task to be done by the consultant with the data, is its organization and naming. The files and folders should be organized according to the Local levels, former VDCs/municipalities, wards, Grid Sheet and Free Sheet as specified in the standard convention provided by the department.

The type of data and files currently in the survey offices are :

Map data : Main Map, File Map, Gaun block Map, Parcel Map and भोग बमोजिमको नक्सा
Data format: Vector data in .geodatabases format with several feature layers

Scanned images of maps in .tiff format

Scanned Fieldbook: jpeg/png/tiff

Scanned Plotregister: jpeg/png/tiff

Note: the convention of file naming and folder organization will be provided by the department. A report compiling the list of all the existing Geodatabases, scanned images of fieldbook and plotregister to be migrated should be provided and verified by the concerned survey offices prior to the migration task. The consultant should complete the task as assigned in this TOR on the basis of the provided report.

3.2.2 Database Check and correction of SAEx and Parcel Editor Databases

Digital cadastral data in survey offices are currently either prepared using SAEx by digitizing scanned images of cadastral maps or received after a digital survey and prepared by using parcel editor. Either way, the data is GIS based and is stored in .geodatabases format with slight changes in attributes. These data are being continuously used with full edit access in survey offices hence, are accumulated with attribute and geometric errors. So, SAEx and Parcel Editor databases should be thoroughly checked and corrected for database, attribute and geometry related errors. For ease in cleaning the database, the department has prepared tools / scripts. These scripts are written in Python and can be used / modified according to need during the cleaning process. The tools automate detection and cleaning of generalized errors and can assist in bulk work. These tools are only for assistance so along with the tools, each and every data must be checked/cleaned manually for other possible file-specific errors. Following conditions must be fulfilled in cleaning the database:

- a. Data must be backed up in the local server of the survey office before starting the database check and correction procedure.
- b. The databases need to be compacted using compact database scripts to remove residuals.
- c. If parallel databases exist for the same place with different branch-editing, then all the edits should be merged to a single database using the parallel database merge script.
- d. There should not be data repetition among the databases. The database of a ward of a particular VDC should contain the data for that ward only. Sometimes data of a particular VDC/Municipality may contain a small portion of another VDC/Municipality which already exists in its own VDC/Municipality database. These redundant data must be searched and deleted in order to avoid data duplication after migration.
- e. In case of the Segments layer check and correction of attributes of the segments (ensure ParFID is set to OBJECTID of the particular parcel where the segment touches and correct segment type is applied) should be done.
- f. In case of the construction layer following works should be done:

- i. removal of duplicate construction features
 - ii. topology check with parcel layer
 - iii. check and correction of attributes of constructions (ensure ParFID is set to OBJECTID of the particular parcel where the construction lies and correct construction type is applied)
- g. Attribute check script identifies errors in attributes particularly district code, VDC code, sheet number, ward number, parcel number and parcel type in the parcel layer of the data; these errors must be corrected for each parcel. VDC Codes and District Codes will be provided by the Department.
- h. For geometric correction, the locational accuracy and topological consistency of the layers in the databases should be confirmed. The following checks are to be done:
 - i. If some sheets are found to be in the wrong location, they should be moved to their respective positions. The corners of the adjacent sheets should also match.
 - ii. The databases should be checked for multipolygons, which are a group of polygons with one geometry. Such multipolygons should be separated into individual polygons.
 - iii. For each database, gaps and overlaps in polygon layers should be identified and fixed by running fix gaps and overlaps script. Parcels with very small areas should be reviewed for each feature in the parcel layer as the script may not fix errors for all the features.
 - iv. The sheets should be checked for leftover parcels (i.e. the remaining area of the sheets left as a single parcel feature while digitizing) and they should be deleted.
- i. In addition to the above checks, following should be done for Aayojana and Gaun Block maps management:
 - i. Identification of the mother parcel/s
 - ii. Attribute and Geometric corrections
 - iii. Removal of repetitive parcels
 - iv. File naming according to the mother parcels
- j. Other errors in the data that the department discovers also need to be cleaned by the consultant.

Note: The scripts mentioned above will be provided by the department. As per the requirements, if any improvements on the scripts or addition of scripts is deemed necessary, consultants can make the amendments/additions which should be approved by the department before implementation.

3.2.3 Georeferencing of free sheet cadastral maps.

Cadastral maps in survey offices can either be Free sheets measured in arbitrary coordinate systems or Grid sheets measured based on national coordinate systems. Freesheet maps are island maps and are digitized in arbitrary coordinates. These maps contain marginal information which provide relative locations of their adjoining map sheets. This information can be viewed in their scanned images. Freesheet map data needs to be georeferenced in order to create a seamless cadastral data. Georeferencing should be done on the basis of orthorectified satellite images which are georeferenced in the national cadastral coordinate system (MUTM). Georeferencing should meet following conditions to be deemed approvable:

- a. Data must be backed up in the local server of the survey office before starting georeferencing.
- b. Area and shape of the features must be preserved (features can **only** be moved and/or rotated)
- c. Georeferencing should be done by consulting the staff who is responsible for the respective map sheet.
- d. In case of conflict, first priority should be given to sheet margin over satellite image.
- e. All layers in geodatabases should be georeferenced.
- f. Georeferencing is mandatory for all files that are digitized in arbitrary coordinates including gaun blocks, and aayojana maps.
- g. Georeferencing will not be considered complete until the scanned images of respective data are georeferenced and rectified.
- h. If any sheet cannot be located even after consultation with respective office staff and technical team member(s) from the department, the sheet should be placed to its closest open area without overlapping with other map sheets.

Note: projection and coordinate parameters will be provided by the department

3.2.4 Indexing and linking of Plot Registers and Fieldbook images with NeLIS.

Along with spatial data, survey offices also keep records of two important books; fieldbooks and plot registers. Fieldbooks are documents prepared during the time of adjudication and keep record of ownership of land parcels during registration. This document does not change and is kept as a base reference for any parcels in existence. Plot registers are registers that record information about daily transactions (parcel split, parcel merge, tile check, map correction) of survey offices. Following conditions should be followed in regards to plot registers and fieldbooks :

- a. Scanning of all plot registers and fieldbooks must be done and should not be distorted when zoomed upto 200%. Some of the offices might have scanned images in which case those images should be checked for quality

and completeness. If quality is not in acceptable range, they must be rescanned and should be completed for incomplete fieldbooks/plot registers.

- b. Each scanned image must be arranged according to following conventions:
 - i. Naming:
VDC/MunicipalityName_WardNo_SheetNo_ParcelNoStart-ParcelNoEnd
eg: For field book of VDC Dhulinagar ward no 5 sheet no 5 ka and page containing parcels 5, 6, 7 and 8 the filename must be: Dhulinagar_5_ka_5-8.jpg
 - ii. Arrange the scanned images within a separate image folder according to standard convention given by the department.
 - iii. Indexing of the parcels should be done for plot registers according to the history and field book images.

3.3 Cadastral data migration in NeLIS.

3.3.1 Optimization of Cadastral Data Migration tool:

NeLIS has been implemented in 58 survey offices and the data are migrated into the NeLIS database by the use of a migration tool developed by the department. The migration tool reads the map data in .geodatabases file format and writes these data into the NeLIS database. With the use of the tool, folder based migration as well as individual file based migration is possible. Similarly, a notification system has been implemented that notifies the status of migration in Telegram messaging application.

The same tool must be used in order to carry out the migration of the map data in .geodatabases file format. Although most of the requirements of migration are fulfilled by the tool, there are few important enhancements that must be done in the tool. Optimization of this tool needs to be done in the following areas:

- a. Addition of geometry checking tool so that the error on the geometry (if any) is shown at the time of the migration
- b. Currently the migration tool does not migrate the history data from the existing map data, thus the migration tool should be enhanced to migrate the parcel history layer from the map data to the NeLIS database.
- c. If any other enhancement is identified by the consultant, the enhancement can be done which is subject to approval by the department.

Optimization report should be submitted by the consultant to the department.

3.3.2 Cadastral Data Migration

After the cleaning process of data has been completed and verified by the technical team as defined by the department, consultants will be given

permission for the migration of the data to the NeLIS environment. For the migration following steps should be taken:

- a. The correction of all the attribute and geometric errors should be verified before the beginning of the migration.
- b. Backup of the final cleaned data (SAEx and Parcel Editor Geodatabase) must be done in the local server of the survey office before beginning the migration process.
- c. Migration must be done with the use of one specified computer in the survey office as instructed by the department.
- d. Migration of the SAEx and Parcel Editor Geodatabase to NeLIS database must be done using the optimized migration tool in the test environment.
- e. The migrated data must be checked in the test environment by the consultant and then reported to the department after the completion. Thus migrated data in the test environment must be verified and approved by the administrator user of respective survey office. A report containing the list of all mapsheets, their migration status and approval by survey office head should be prepared, which must be submitted to the technical team of the department for approval of migration in the live database. If any errors are found on the migrated data after the migration into the test environment, these errors must be corrected and re-migrated to the test database for approval before migrating to the live server. A list of such re-migration must be submitted to the technical team.
- f. After approval of migration in the test environment and completion of training, data must be migrated in the live database. Migration on the live NeLIS database should be done overnight before the date of go-live as instructed by the department so that all the transactions from the existing systems are migrated.
- g. Based on the index, fieldbooks and plot registers should be migrated to the NeLIS database and the scanned images should be uploaded to the file server. This task must be done in coordination with the department.
- h. A report compiling the list of all the migrated map data, scanned images of fieldbooks and plot registers should be submitted after completion of the migration task with consent from the survey office.

3.3.3 NeLIS Installation:

NeLIS software must be installed in all the office computers along with supporting software needed. NeLIS operates best in the Windows 10 (64 bit) environment. So the consultant must install Windows 10 (64 bit) Operating System in the computers if required. Consultant must install NeLIS software along with other supporting softwares (Visual C++ Redistributable all versions, microsoft dot net framework 4+, Kalimati font, Linkus and tightVNC) in each computer of the survey office which are required for operation and support. NeLIS installation must be configured according to the office network which

must be done in each computer. The NeLIS configuration related to the survey office will be provided by the department.

Note: The installation of prerequisites and the application must be completed before the conduction of training.

3.4 Technology transfer, live operation and support

The NeLIS users' credentials will be created by the consultant's technical team in both test and live for the office staff. The Credentials should be created on the base of Employee ID.

After completion of the migration on the test environment and before going live in the NeLIS application, training on the use of the NeLIS application and MeroKitta should be provided by the consultant to the office staff. This training should be conducted without affecting the daily operations of the survey offices. This training operation should be conducted in the test environment and all possible cases of transaction should be demonstrated as well as trained to the staff. All necessary training equipment and materials should be arranged by the consultant.

With the completion of the training on the test environment, the go-live period is instructed by the department/technical team. From that day on, NeLIS application should be fully operational in the survey office.

Six months technical support to all the NeLIS implemented offices should be provided by the consultant after completion of the project.

3.5 Conditions:

The following conditions should be met by the consultant throughout the contract period:

1. All cadastral data must only be accessed within the premises of the survey office. No data is allowed to leave the office in any way/any form.
2. Lab setup for data cleaning and migration is the responsibility of the consultant. Consultant shall be provided access only to cadastral data from the server of the survey office. The office shall not be liable for any infrastructural support other than office premises, lab space and server access.
3. Data cleaning and organization must be done in live data without affecting regular office operation.

4 Reports:

After receiving the work order, the consultant must submit the following reports:

S.N.	Reports	Timeline	Remarks
1.	Inception report	Within Fifteen Days from contract signing	
2.	Task Completion report (Office Wise)	After completion of all the tasks (georeferencing, migration, optimization, plot register and fieldbook indexing and Attribute and Geometry correction report.)	If optimization is done the source code should be provided to Survey Department
3.	Final reports containing complied report of each theme mentioned above except inception report, technology transfer report, Standard operation manual.(describe standard operation manual)	Within fifteen months of contract signing	

5 Team Composition

1	Key Experts			
S.N.	Position	Qualification	Experience	Input
1.	Team Leader (One person)	Master's Degree in Geoinformation/Geoinformatics Science/Engineering with Information technology included in course (at least six months mandatory ICT training if ICT not included in course) or Masters in Information Technology/ Computer Science/Computer Engineering with At least six months mandatory training in GIS and Remote sensing or having post-graduate diploma in GIS or Remote sensing as an extra academic achievement in addition to the specified master degree if GIS and RS are not included in course. Preferable PHD in above mentioned subject with mandatory training as mentioned above.	At least 5 projects experience as team leader in Related field	15 months

1	Key Experts			
S.N.	Position	Qualification	Experience	Input
2.	Data Analyst (Three persons)	At least Bachelor's Degree in IT Related Field, preferable masters in IT related field	At least 5 projects experience in related field. After completion of Basic Degree	14.5 months
3.	Network Administrator (Three persons)	At least Bachelor's Degree in IT Related Field preferable masters in IT related field	At least 5 projects experience in related field. After completion of Basic Degree	14.5 months
4.	GIS Expert (Six persons)	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree	14.5 months

2	Non-Key Experts			
S.N.	Position	Qualification	Experience	Input
1.	Computer Operator (Twenty Four persons)	At least Intermediate level with 6 months Computer training.	At least 2 years of relevant work experience in related field after completion of relevant course. After completion of Basic Degree	14.5 months

The consulting firm must provide a letter of assurance that all the information on CVs submitted are true and truly signed by the respective professional himself/herself.

Job Descriptions:

Key Experts

1. Team Leader

- Lead the consulting team in the implementation of NeLIS and MeroKitta systems.
- Oversee the planning, coordination, and execution of all project activities.
- Liaise with the Survey Department and Survey Offices to ensure project alignment with objectives.
- Provide technical guidance and mentorship to team members.
- Monitor project progress, identify risks, and implement mitigation strategies.
- Ensure adherence to project timelines and deliverables.

- Prepare and submit project progress reports to the client.

2. Data Analysts

- Analyze existing cadastral data in survey offices and identify areas for improvement.
- Organize and clean data according to department standards and conventions.
- Utilize scripts and tools provided by the department for database cleaning and correction.
- Verify the accuracy and integrity of cleaned data through rigorous quality checks.
- Coordinate with GIS experts for georeferencing and indexing of cadastral maps and documents.
- Prepare detailed reports documenting data cleaning procedures and outcomes.
- Collaborate with network administrators and GIS experts for seamless data migration.

3. Network Administrators

- Install and configure networking equipment, including routers, LAN switches, and networking components, in survey offices.
- Establish intranet connectivity between district offices and central servers.
- Configure database and application servers at the Survey Department and Government Integrated Data Center.
- Monitor network performance and troubleshoot technical issues as they arise.
- Ensure network security measures are implemented and maintained.
- Provide ongoing maintenance and support for network infrastructure.
- Prepare detailed floor plans and IP address assignments for network configurations.

4. GIS Experts

- Utilize GIS software for geospatial analysis and data processing.
- Assist data analysts in georeferencing cadastral maps and documents.
- Develop and implement scripts and tools for database cleaning and correction.
- Conduct topology checks and ensure data integrity in GIS databases.
- Collaborate with data analysts to optimize the Cadastral Data Migration tool.
- Provide training and technical support to survey office staff on GIS software and tools.
- Work closely with the team leader to ensure GIS activities align with project objectives and timelines.

Non-Key Experts

1. Computer Operator

- Assist in data cleaning and migration tasks under the supervision of key experts.
- Operate computer software and tools required for data processing and analysis.

- Follow departmental guidelines and standards for organizing and naming cadastral data files.
- Ensure the quality and completeness of scanned plot registers and fieldbook images.
- Index and arrange scanned images according to department conventions.
- Provide support during NeLIS installation and configuration on office computers

6 Period of Performance

The entire work is expected to be accomplished within 15 (Fifteen) months from the date of agreement. The consulting firm is required to develop the work schedule reflecting the tasks of each of experts to meet the target. The consulting firm is required to strictly follow the timeline and go ahead into next milestone only after obtaining the approval from Survey department or Technical team.

7 Experience of the Consulting Firm:

- The Consulting Firm should have at least five projects experience in consulting service.
- The Consulting Firm should have at least two project in land administration (cadastral based data migration).

The Consulting Firm shall have following Software/equipment to accomplish the proposed assignment:

- GIS Software with Orthorectification and Spatial Analyst features
- Remote Sensing Software
- Large Size Color Scanner (A1)
- Vehicle (4-wheeler)

8 Time Schedule:

- Expected date of Agreement: 2081/03
- Expected date for commencement of consulting services: 2081/03
- Expected date of field work initiation: 2081/04
- Expected date of completion of data migration of first Seven survey offices: 2081/07
- Expected date of completion of data migration of next twelve survey offices: 2081/09
- Expected date of completion of data migration of next twelve survey offices: 2081/11
- Expected date of completion of data migration of next eighteen survey offices: 2082/02

- Expected date of completion of data migration of next eighteen survey offices: 2082/05
- Expected date of completion of data migration of remaining 5 survey offices and final completion of project and submission of final report: 2082/6
- Support period: 2083/01

9 Payment Schedule:

Payment shall made to the Consulting firm in the following manner:

1. 20% (Twenty Percent) of the contract price shall be paid after Supply of networking equipment for all Seventy-two survey offices.
2. 55% (Fifty Five Percent) of the contract price shall be paid upon completion of data migration in offices after completion of network configuration in same survey offices.
 - a. 5% after NeLIS implementation completion in first 7 survey offices (5% of contract price)
 - b. Next 10% after NeLIS implementation completion in next 12 survey offices (10% of contract price)
 - c. Next 10% after NeLIS implementation completion in next 12 survey offices (10% of contract price)
 - d. Next 15% after NeLIS implementation completion in next 18 survey offices (15% of contract price)
 - e. Final 15% after NeLIS implementation completion in next 18 survey offices (15% of contract price)
3. 25% (Twenty Five Percent) of the contract price shall be paid after NeLIS implementation completion in remaining 5 Survey offices and approval of final report by the client.

D. Evaluation of Consultant's EOI Application

Evaluation of Consultant's EOI Application

Consultant's EOI application which meets the eligibility criteria will be ranked on the basis of the Ranking Criteria.

i) Eligibility & Completeness Test

Sl. No.	Criteria Title	Compliance
1	Corporate Registration	
2	Tax Clearance/Tax Return Submission	
3	VAT/PAN Registration	
4	EOI Form 1: Letter of Application	
5	EOI Form 2: Applicant's Information Form	
6	EOI Form 3: Experience (3(A) and 3(B))	
7	EOI Form 4: Capacity	
8	EOI Form 5: Qualification of Key Experts	
9	In case of a natural person or firm/institution/company which is already declared blacklisted and ineligible by the GoN, any other new or existing firm/institution/company owned partially or fully by such Natural person or Owner or Board of director of blacklisted firm/institution/company; shall not be eligible consultant.

ii) EOI Evaluation Criteria

A. Qualification

Sl. No.	Criteria	Minimum Requirement
1	Qualification of Key Experts: Team leader	Master's Degree in Geoinformation/Geoinformatics Science/Engineering with Information technology included in course (at least six months mandatory ICT training if ICT not included in course) or Masters in Information Technology/ Computer Science/Computer Engineering with At least six months mandatory training in GIS and Remote sensing or having post-graduate diploma in GIS or Remote sensing as an extra academic achievement in addition to the specified master degree if GIS and RS are not included in course.
2	Qualification of Key Experts: Data Analyst 1	At least Bachelor's Degree in IT Related Field, preferable masters in IT related field
3	Qualification of Key Experts: Data Analyst 2	At least Bachelor's Degree in IT Related Field, preferable masters in IT related field
4	Qualification of Key Experts: Data Analyst 3	At least Bachelor's Degree in IT Related Field, preferable masters in IT related field
5	Qualification of Key Experts: Network Administrator 1	At least Bachelor's Degree in IT Related Field preferable masters in IT related field
6	Qualification of Key Experts: Network Administrator 2	At least Bachelor's Degree in IT Related Field preferable masters in IT related field
7	Qualification of Key Experts: Network Administrator 3	At least Bachelor's Degree in IT Related Field preferable masters in IT related field
8	Qualification of Key Experts: GIS Expert 1	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.

Sl. No.	Criteria	Minimum Requirement
9	Qualification of Key Experts: GIS Expert 2	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.
10	Qualification of Key Experts: GIS Expert 3	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.
11	Qualification of Key Experts: GIS Expert 4	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.
12	Qualification of Key Experts: GIS Expert 5	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.
13	Qualification of Key Experts: GIS Expert 6	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.
14	Experience of Key Experts: Team leader	At least 5 projects experience as team leader in Related field
15	Experience of Key Experts: Data Analyst 1	At least 5 projects experience in related field. After completion of Basic Degree
16	Experience of Key Experts: Data Analyst 2	At least 5 projects experience in related field. After completion of Basic Degree
17	Experience of Key Experts: Data Analyst 3	At least 5 projects experience in related field. After completion of Basic Degree
18	Experience of Key Experts: Network Administrator 1	At least 5 projects experience in related field. After completion of Basic Degree
19	Experience of Key Experts: Network Administrator 2	At least 5 projects experience in related field. After completion of Basic Degree
20	Experience of Key Experts: Network Administrator 3	At least 5 projects experience in related field. After completion of Basic Degree
21	Experience of Key Experts: GIS Expert 1	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree
22	Experience of Key Experts: GIS Expert 2	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree
23	Experience of Key Experts: GIS Expert 3	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree
24	Experience of Key Experts: GIS Expert 4	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree
25	Experience of Key Experts: GIS Expert 5	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree
26	Experience of Key Experts: GIS Expert 6	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree

Score: 39.0

B. Experience

Sl. No.	Criteria	Minimum Requirement
1	General Experience of consulting firm	5 projects
2	Specific experience of consulting firm within last 7 years. In case of person, specific experience of the person within last 4 years.	2 projects
3	Similar Geographical experience of consulting firm	1 project

Score: 46.0

C. Capacity

Sl. No.	Criteria	Minimum Requirement
1	Financial Capacity.[Average turnover required shall not exceed 150% of cost estimate]	50000000
2	GIS Software with Orthorectification and Spatial Analyst featuresassignment.[This Evaluation criteria should be deleted if infrastructure/equipment are not the part of the proposed assignment]	1
3	Remote Sensing Software	1
4	Vehicles (4 wheeler)	1
5	Large Size Color Scanner (A1) Color Plotter (A1)	1

Score: 15.0

Minimum score to pass the EOI is: 60

Note : If the corruption case is being filed to Court against the Natural Person or Board of Director of the firm/institution /company or any partner of JV, such Natural Person or Board of Director of the firm/institution /company or any partner of JV such consultant's proposal shall be excluded during the evaluation.

1. Letter of Application	33
2. Applicant's Information Form	35
3. Experience	36
4. Capacity	40
5. Key Experts (Include details of Key Experts only)	42

Standard EOI Document

A. Request for Expression of Interest

Government of Nepal
Ministry of Land Management, Co-operatives and Poverty Alleviation
Survey Department
Minbhawan, Kathmandu

Request for Expression of Interest for

Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta” Application (Data optimization, networking and server management, web map services, hosting live system and system support).

EOI No: SD/CS/QCBS/2080/81/01

Date: May 16, 2024

1. Government of Nepal (GoN) has allocated fund from Government of Nepal toward the cost of **Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta” Application (Data optimization, networking and server management, web map services, hosting live system and system support).** and intends to apply a portion of this **fund** to eligible payments under the Contract for which this Expression of Interest is invited for **National consulting service.**
2. The **Survey Department**, now invites Expression of Interest (EOI) from eligible consulting firms (“consultant”) to provide the following consulting services: **Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta” Application (Data optimization, networking and server management, web map services, hosting live system and system support).**
3. Interested eligible consultants may obtain further information and EOI document free of cost at e-GP system www.bolpatra.gov.np/egp.
4. Consultants may associate with other consultants to enhance their qualifications.
5. The interested firms to ensure their eligibility, shall submit the following documents along with respective EOIs:
6. Copy of company/firm Registration certificate
7. VAT/PAN Registration
8. Tax Clearance certificate for the Fiscal year 2079/80.
9. Expressions of interest shall be submitted online through e-GP system www.bolpatra.gov.np/egp on or before 12:00 hour on May 31, **2024**. EOI received after deadline will be rejected. EOI shall be opened in 13:00 hours on May 31, 2024 at the office of Survey Department, Minbhawan Kathmandu.
10. In case the last date of obtaining and submission of the EOI documents happens to be a holiday, the next working day will be deemed as the due date but the time will be the same as stipulated.
11. EOI will be assessed based on **Qualification, Experience, and Capacity** of consulting firm and key personnel. Minimum score to pass the EOI is **60** marks. Based on evaluation of EOI, only shortlisted firms will be invited to submit technical and financial proposal through a request for proposal.
12. Survey Department, Minbhawan, Kathmandu reserves the right to accept or reject any or all applications, or cancel the entire proceedings without giving any reasons, whatsoever.

13. Instructions for submission of Expression of Interest

1. Expression of Interest may be submitted by a sole firm or a joint venture of consulting firms and the maximum number of partners in JV shall be limited to three.
2. Interested consultants must provide information indicating that they are qualified to perform the services (*descriptions, organization and employee and of the firm or company, description of assignments of similar nature completed in the last 7 years and their location, experience in similar conditions, general qualifications and the key personnel to be involved in the proposed assignment*).
3. This expression of interest is open to all eligible **consulting firm**.
4. The assignment has been scheduled for a period of **15 months**. Expected date of commencement of the assignment is **2081/04/....**
5. A Consultant will be selected in accordance with the **QCBS** method.
6. Expression of Interest should contain following information:
 - (i) A covering letter addressed to the representative of the client on the official letter head of company duly signed by authorized signatory.
 - (ii) Applicants shall provide the following information in the respective formats given in the EOI document:
 - *EOI Form: Letter of Application (Form 1)*
 - *EOI Form: Applicant's Information (Form 2)*
 - *EOI Form: Work Experience Details (Form 3(A), 3(B) & 3(C))*
 - *EOI Form: Capacity Details (Form 4)*
 - *EOI Form: Key Experts List (form 5).*
7. Applicants may submit additional information with their application but shortlisting will be based on the evaluation of information requested and included in the formats provided in the EOI document.
8. The Expression of Interest (EOI) document must be duly completed and submitted **"by electronically only using the forms and instructions provided by the system"**.
9. The completed EOI document must be submitted on or before the date and address mentioned in the **"Request for Expression of Interest."** In case the submission falls on public holiday the submission can be made on the next working day. Any EOI Document received after the closing time for submission of proposals shall not be considered for evaluation.

B. Brief TOR

Consulting Service for Data Cleaning, Data Migration, Networking Support for implementation of Nepal Land Information System (NeLIS) and MeroKitta” Application (Data optimization, networking and server management, web map services, hosting live system and system support).

1 Background

Survey Department, the National Mapping Organization also works as national cadastral organization. Department has district survey offices in all the districts which work for cadastral survey and land administration services. Cadastral survey of all the country has been finished and also the department has started re-survey from some of the district survey offices. During the time, till date, department has also prepared the digital cadastral data of all the districts generated from the paper maps by digitizing it. At this stage, more than 100 district survey offices are providing digital cadastral service on the basis of the digitized cadastral data.

Survey Department has developed two systems for cadastral services. For data acquisition, Parcel Editor is being used and for service deliver, Spatial Application Extension (SAEx) is being used. Both of these software are based on Arc GIS platform. Hence for the data preparation from Parcel Editor and service delivery from the SAEx, every survey office has its separate database maintained in their own server. This has increased the workload for the offices in maintaining the infrastructure as well. To minimise all of these shortcomings and store the data in central server and provide the service from the server based application, Survey Department has recently developed open source based Nepal Land Information System (NeLIS) and to provide the online service “MeroKitta” system has been developed. In the fiscal year 2079/80, the system has been implemented in 58 district survey office and it is planned to implement in 72 next offices.

For this system, central server has been established in Survey Department and a backup server has been established in Government Integrated Data Center “GIDC”. Here, both database server and application server is maintained. The district offices access the database at this server from the application set up in the server. Thus, all the data of the district offices are stored securely at the center. This eliminates the workload of maintaining the infrastructure individually at the district office and data from all the offices are integrated at the central server.

2 Objectives

The objectives of the NeLIS implementation are:

1. Creation of nation-wide seamless cadastral database that is stored centrally
2. Configure central database and application server to establish client server architecture for service delivery from district offices through centrally stored database and application
3. Establish intranet connectivity with Survey Office and Central server system with all necessary configurations and
4. Run the NeLIS and MeroKitta system live from the survey offices.

3 Scope of the work

3.1 Network and Server management:

3.1.1 Networking Equipment Installation:

The consultant is tasked with supplying, delivering, and installing Networking Equipment in all Survey Offices where NeLIS is being deployed. The consultant is required to furnish the specified equipment, including,

- a. A Router,
- b. LAN switch, and
- c. LAN networking components,
 - i. Network Rack with Cable manager
 - ii. Power Distribution Unit
 - iii. Networking Point
 - iv. Patch panel
 - v. Patch Chord
- vi. Electric Cables, RJ 45, Ethernet Cable- Cat6, Listi and all other required accessories to accomplish LAN Networking.

along with the installation services for these items at each survey office. The consultant is expected to adhere to the provided specifications for the equipment.

i. Technical Specifications for Branch Router

Particulars	Requirements
Certification	ISO / CE
RAM	1GB or more
Ports	2x Gigabit WAN port and 4x Gigabit LAN Ports.
Features	● Routing Information Protocol Versions 1 and 2 (RIPv1 and RIPv2) ● Generic Routing Encapsulation (GRE) with dynamic routing protocol (e.g OSPF). ● Standard 802.1d Spanning Tree Protocol ● Layer 2 Tunneling Protocol (L2TP) ● L2TP Version 3 (L2TPv3) ● Network Address Translation (NAT) ● Dynamic Host Configuration Protocol (DHCP) server, relay, and client ● Dynamic DNS ● DNS Proxy and DNS Spoofing ● Access Control Lists (ACLs) ● IPv4 and IPv6 multicast ● Open Shortest Path First (OSPF)

Standard EOI Document

Particulars	Requirements
	● Border Gateway Protocol (BGP) ● Virtual Route Forwarding (VRF) Lite
Security Feature	● Secure Sockets Layer (SSL) VPN for secure remote access ● Hardware-accelerated DES, 3DES, AES 128, AES 192, and AES 256 ● Public-Key-Infrastructure (PKI) support ● IPsec tunnels ● VRF-aware IPsec ● IPsec over IPv6 ● Advanced application inspection and control ● HTTPS, FTP, and Telnet Authentication Proxy ● Dynamic and static port security ● Control plane policing ● Flexible packet matching ● Network foundation protection
Warranty and Support	Minimum 1 year with Parts replacement and service.
Installation and Configuration	The contractor need to perform all necessary tasks including but not limited to Installation, configuration and support up to warranty periods.
Accessories	All related Accessories should be supplied
Qualification	The proposed appliance Original Equipment Manufacturer (OEM) should be Leader in Gartner Magic Quadrant for wired and Wireless LAN Infrastructure for last 2 years.
Service Tag	Should be provided at the time of delivery.

ii. Technical Specifications for LAN Switch

Particulars	Requirements
Certification	ISO / CE
Ports	Gigabit RJ45 Port (ports as required by the survey office) + minimum 2x combo Gigabit SFP Port.
Switching Capacity	54Gbps
Forwarding Performance (64 Byte packet size)	40Mpps
Management	Secure Socket Shell (SSH), HTTPS, Simple Network Management Protocol version 3 (SNMPv3)
Features	Advanced defense mechanisms, including Dynamic ARP Inspection (DAI), IP Source Guard, and Dynamic Host Configuration Protocol (DHCP) snooping, detect and block

Standard EOI Document

Particulars	Requirements
	deliberate network attacks. Combinations of these protocols are also referred to as IPMB (IP-MAC-port binding). • DOS (denial-of-service) attack prevention maximizes network uptime in the presence of an attack • Protection of management sessions using Radius, TACACS+ and local database authentication as well as secure management sessions over SSL, SSH, and SNMPv3. • Support for advanced network security applications such as IEEE 802.1X port security to tightly limit access to specific segments of your network. Web based authentication provides a consistent interface to authenticate all types of host devices and operating systems, without the complexity of deploying IEEE 802.1X clients on each endpoint. Time based ACLs and Port Operation restrict access to the network during predesignated times, such as business hours.
Warranty and Support	Minimum 1 year with Parts replacement and service.
Installation and Configuration	The contractor need to perform all necessary tasks including but not limited to Installation, configuration and support up to warranty periods.
Accessories	All related Accessories should be supplied
Qualification	The proposed appliance OEM should be Leader in Gartner Magic Quadrant for wired and Wireless LAN Infrastructure for last 2 years.
Service Tag	Should be provided at the time of delivery.

iii. Technical Specifications for LAN Networking

Particulars	Requirements
Network Rack with cable manager	9U
Networking Point	Approx. 15
Patch Panel	Port Patch panel loaded keystone jack as required per switch ports.
Patch Chord	0.5m and 5m Cat6 Ethernet Patch chord as per office requirement
Power Distribution Unit (PDU)	Universal PDU for LAN Switch

Standard EOI Document

Particulars	Requirements
Other Accessories	Electrical cables, RJ 45, Ethernet Cable Cat6, Listi and all other required accessories to accomplish LAN Networking.
Warranty, Support and Installation	The contractor needs to perform all necessary tasks including but not limited to Installation, configuration and support up to warranty periods. Minimum 1 year with Parts replacement and service at Survey Offices

3.1.2 Networking configuration:

The consultant is responsible for configuration of LAN according to guidelines provided by the department, ensuring that all the computers in the LAN are within the department's intranet network. Connection between the survey office and central server through intranet must be established prior moving forward to further steps.

3.1.3 Server configuration

The consultant is responsible establishing the database server and application server procured by Survey Department at the Government Integrated Data Center along with the backup at Survey Department. All the servers, router, switch, storage device and firewall need to be established and configured. The consultant is also solely responsible for the maintenance and regular network support throughout the contract. After the completion of network configuration, a report must be submitted with a detailed floor plan of computers and their respective IP addresses.

Note: The guideline/convention regarding the network setup will be provided by the department.

3.2 Data cleaning for NeLIS and MeroKitta implementation.

3.2.1 File Management

The existing cadastral data in survey offices are stored in a local server in a file based system. The files are accessed by system users within the office LAN using Windows file explorer. The stored files do not have existing standard folder organization and naming convention. The first and foremost task to be done by the consultant with the data, is its organization and naming. The files and folders should be organized according to the Local levels, former VDCs/municipalities, wards, Grid Sheet and Free Sheet as specified in the standard convention provided by the department.

The type of data and files currently in the survey offices are :

Map data : Main Map, File Map, Gaun block Map, Parcel Map and भोग बमोजिमको नक्सा

Data format: Vector data in .geodatabases format with several feature layers

Scanned images of maps in .tiff format

Scanned Fieldbook: jpeg/png/tiff

Scanned Plotregister: jpeg/png/tiff

Note: the convention of file naming and folder organization will be provided by the department. A report compiling the list of all the existing Geodatabases, scanned images of fieldbook and plotregister to be migrated should be provided and verified by the concerned survey offices prior to the migration task. The consultant should complete the task as assigned in this TOR on the basis of the provided report.

3.2.2 Database Check and correction of SAEx and Parcel Editor Databases

Digital cadastral data in survey offices are currently either prepared using SAEx by digitizing scanned images of cadastral maps or received after a digital survey and prepared by using parcel editor. Either way, the data is GIS based and is stored in .geodatabases format with slight changes in attributes. These data are being continuously used with full edit access in survey offices hence, are accumulated with attribute and geometric errors. So, SAEx and Parcel Editor databases should be thoroughly checked and corrected for database, attribute and geometry related errors. For ease in cleaning the database, the department has prepared tools / scripts. These scripts are written in Python and can be used / modified according to need during the cleaning process. The tools automate detection and cleaning of generalized errors and can assist in bulk work. These tools are only for assistance so along with the tools, each and every data must be checked/cleaned manually for other possible file-specific errors. Following conditions must be fulfilled in cleaning the database:

- a. Data must be backed up in the local server of the survey office before starting the database check and correction procedure.
- b. The databases need to be compacted using compact database scripts to remove residuals.
- c. If parallel databases exist for the same place with different branch-editing, then all the edits should be merged to a single database using the parallel database merge script.
- d. There should not be data repetition among the databases. The database of a ward of a particular VDC should contain the data for that ward only. Sometimes data of a particular VDC/Municipality may contain a small portion of another VDC/Municipality which already exists in its own VDC/Municipality database. These redundant data must be searched and deleted in order to avoid data duplication after migration.
- e. In case of the Segments layer check and correction of attributes of the segments (ensure ParFID is set to OBJECTID of the particular parcel where the segment touches and correct segment type is applied) should be done.
- f. In case of the construction layer following works should be done:
 - i. removal of duplicate construction features
 - ii. topology check with parcel layer

Standard EOI Document

- iii. check and correction of attributes of constructions (ensure ParFID is set to OBJECTID of the particular parcel where the construction lies and correct construction type is applied)
 - g. Attribute check script identifies errors in attributes particularly district code, VDC code, sheet number, ward number, parcel number and parcel type in the parcel layer of the data; these errors must be corrected for each parcel. VDC Codes and District Codes will be provided by the Department.
 - h. For geometric correction, the locational accuracy and topological consistency of the layers in the databases should be confirmed. The following checks are to be done:
 - i. If some sheets are found to be in the wrong location, they should be moved to their respective positions. The corners of the adjacent sheets should also match.
 - ii. The databases should be checked for multipolygons, which are a group of polygons with one geometry. Such multipolygons should be separated into individual polygons.
 - iii. For each database, gaps and overlaps in polygon layers should be identified and fixed by running fix gaps and overlaps script. Parcels with very small areas should be reviewed for each feature in the parcel layer as the script may not fix errors for all the features.
 - iv. The sheets should be checked for leftover parcels (i.e. the remaining area of the sheets left as a single parcel feature while digitizing) and they should be deleted.
 - i. In addition to the above checks, following should be done for Aayojana and Gaun Block maps management:
 - i. Identification of the mother parcel/s
 - ii. Attribute and Geometric corrections
 - iii. Removal of repetitive parcels
 - iv. File naming according to the mother parcels
 - j. Other errors in the data that the department discovers also need to be cleaned by the consultant.

Note: The scripts mentioned above will be provided by the department. As per the requirements, if any improvements on the scripts or addition of scripts is deemed necessary, consultants can make the amendments/additions which should be approved by the department before implementation.

3.2.3 Georeferencing of free sheet cadastral maps.

Cadastral maps in survey offices can either be Free sheets measured in arbitrary coordinate systems or Grid sheets measured based on national coordinate systems. Freesheet maps are island maps and are digitized in arbitrary coordinates. These maps contain marginal information which provide relative locations of their adjoining map sheets. This information can be viewed in their scanned images. Freesheet map data needs to be georeferenced in order to create a seamless cadastral data. Georeferencing should be done on the basis of orthorectified satellite images which are georeferenced in the national

Standard EOI Document

cadastral coordinate system (MUTM). Georeferencing should meet following conditions to be deemed approvable:

- a. Data must be backed up in the local server of the survey office before starting georeferencing.
- b. Area and shape of the features must be preserved (features can **only** be moved and/or rotated)
- c. Georeferencing should be done by consulting the staff who is responsible for the respective map sheet.
- d. In case of conflict, first priority should be given to sheet margin over satellite image.
- e. All layers in geodatabases should be georeferenced.
- f. Georeferencing is mandatory for all files that are digitized in arbitrary coordinates including gaun blocks, and aayojana maps.
- g. Georeferencing will not be considered complete until the scanned images of respective data are georeferenced and rectified.
- h. If any sheet cannot be located even after consultation with respective office staff and technical team member(s) from the department, the sheet should be placed to its closest open area without overlapping with other map sheets.

Note: projection and coordinate parameters will be provided by the department

3.2.4 Indexing and linking of Plot Registers and Fieldbook images with NeLIS.

Along with spatial data, survey offices also keep records of two important books; fieldbooks and plot registers. Fieldbooks are documents prepared during the time of adjudication and keep record of ownership of land parcels during registration. This document does not change and is kept as a base reference for any parcels in existence. Plot registers are registers that record information about daily transactions (parcel split, parcel merge, tile check, map correction) of survey offices. Following conditions should be followed in regards to plot registers and fieldbooks :

- a. Scanning of all plot registers and fieldbooks must be done and should not be distorted when zoomed upto 200%. Some of the offices might have scanned images in which case those images should be checked for quality and completeness. If quality is not in acceptable range, they must be rescanned and should be completed for incomplete fieldbooks/plot registers.
- b. Each scanned image must be arranged according to following conventions:
 - i. Naming: VDC/MunicipalityName_WardNo_SheetNo_ParcelNoStart-ParcelNoEnd
eg: For field book of VDC Dhulinagar ward no 5 sheet no 5 ka and page containing parcels 5, 6, 7 and 8 the filename must be: Dhulinagar_5_ka_5-8.jpg
 - ii. Arrange the scanned images within a separate image folder according to standard convention given by the department.

- iii. Indexing of the parcels should be done for plot registers according to the history and field book images.

3.3 Cadastral data migration in NeLIS.

3.3.1 Optimization of Cadastral Data Migration tool:

NeLIS has been implemented in 58 survey offices and the data are migrated into the NeLIS database by the use of a migration tool developed by the department. The migration tool reads the map data in .geodatabases file format and writes these data into the NeLIS database. With the use of the tool, folder based migration as well as individual file based migration is possible. Similarly, a notification system has been implemented that notifies the status of migration in Telegram messaging application.

The same tool must be used in order to carry out the migration of the map data in .geodatabases file format. Although most of the requirements of migration are fulfilled by the tool, there are few important enhancements that must be done in the tool. Optimization of this tool needs to be done in the following areas:

- a. Addition of geometry checking tool so that the error on the geometry (if any) is shown at the time of the migration
- b. Currently the migration tool does not migrate the history data from the existing map data, thus the migration tool should be enhanced to migrate the parcel history layer from the map data to the NeLIS database.
- c. If any other enhancement is identified by the consultant, the enhancement can be done which is subject to approval by the department.

Optimization report should be submitted by the consultant to the department.

3.3.2 Cadastral Data Migration

After the cleaning process of data has been completed and verified by the technical team as defined by the department, consultants will be given permission for the migration of the data to the NeLIS environment. For the migration following steps should be taken:

- a. The correction of all the attribute and geometric errors should be verified before the beginning of the migration.
- b. Backup of the final cleaned data (SAEx and Parcel Editor Geodatabase) must be done in the local server of the survey office before beginning the migration process.
- c. Migration must be done with the use of one specified computer in the survey office as instructed by the department.
- d. Migration of the SAEx and Parcel Editor Geodatabase to NeLIS database must be done using the optimized migration tool in the test environment.
- e. The migrated data must be checked in the test environment by the consultant and then reported to the department after the completion. Thus migrated data in the test environment must be verified and approved by the administrator user of respective survey

Standard EOI Document

office. A report containing the list of all mapsheets, their migration status and approval by survey office head should be prepared, which must be submitted to the technical team of the department for approval of migration in the live database. If any errors are found on the migrated data after the migration into the test environment, these errors must be corrected and re-migrated to the test database for approval before migrating to the live server. A list of such re-migration must be submitted to the technical team.

f. After approval of migration in the test environment and completion of training, data must be migrated in the live database. Migration on the live NeLIS database should be done overnight before the date of go-live as instructed by the department so that all the transactions from the existing systems are migrated.

g. Based on the index, fieldbooks and plot registers should be migrated to the NeLIS database and the scanned images should be uploaded to the file server. This task must be done in coordination with the department.

h. A report compiling the list of all the migrated map data, scanned images of fieldbooks and plot registers should be submitted after completion of the migration task with consent from the survey office.

3.3.3 NeLIS Installation:

NeLIS software must be installed in all the office computers along with supporting software needed. NeLIS operates best in the Windows 10 (64 bit) environment. So the consultant must install Windows 10 (64 bit) Operating System in the computers if required. Consultant must install NeLIS software along with other supporting softwares (Visual C++ Redistributable all versions, microsoft dot net framework 4+, Kalimati font, Linkus and tightVNC) in each computer of the survey office which are required for operation and support. NeLIS installation must be configured according to the office network which must be done in each computer. The NeLIS configuration related to the survey office will be provided by the department.

Note: The installation of prerequisites and the application must be completed before the conduction of training.

3.4 Technology transfer, live operation and support

The NeLIS users' credentials will be created by the consultant's technical team in both test and live for the office staff. The Credentials should be created on the base of Employee ID.

After completion of the migration on the test environment and before going live in the NeLIS application, training on the use of the NeLIS application and MeroKitta should be provided by the consultant to the office staff. This training should be conducted without affecting the daily operations of the survey offices. This training operation should be conducted in the test environment and all possible cases of transaction should be

Standard EOI Document

demonstrated as well as trained to the staff. All necessary training equipment and materials should be arranged by the consultant.

With the completion of the training on the test environment, the go-live period is instructed by the department/technical team. From that day on, NeLIS application should be fully operational in the survey office.

Six months technical support to all the NeLIS implemented offices should be provided by the consultant after completion of the project.

3.5 Conditions:

The following conditions should be met by the consultant throughout the contract period:

1. All cadastral data must only be accessed within the premises of the survey office. No data is allowed to leave the office in any way/any form.
2. Lab setup for data cleaning and migration is the responsibility of the consultant. Consultant shall be provided access only to cadastral data from the server of the survey office. The office shall not be liable for any infrastructural support other than office premises, lab space and server access.
3. Data cleaning and organization must be done in live data without affecting regular office operation.

4 Reports:

After receiving the work order, the consultant must submit the following reports:

S.N.	Reports	Timeline	Remarks
1.	Inception report	Within Fifteen Days from contract signing	
2.	Task Completion report (Office Wise)	After completion of all the tasks (georeferencing, migration, optimization, plot register and fieldbook indexing and Attribute and Geometry correction report.)	If optimization is done the source code should be provided to Survey Department
3.	Final reports containing complied report of each theme mentioned above except inception report,	Within fifteen months of contract signing	

Standard EOI Document

	technology transfer report, Standard operation manual.(describe standard operation manual)		
--	--	--	--

5 Team Composition

1	Key Experts			
S.N.	Position	Qualification	Experience	Input
1.	Team Leader (One person)	Master's Degree in Geoinformation/Geoinformatics Science/Engineering with Information technology included in course (at least six months mandatory ICT training if ICT not included in course) or Masters in Information Technology/ Computer Science/Computer Engineering with At least six months mandatory training in GIS and Remote sensing or having post-graduate diploma in GIS or Remote sensing as an extra academic achievement in addition to the specified master degree if GIS and RS are not included in course. Preferable PHD in above mentioned subject with mandatory training as mentioned above.	At least 5 projects experience as team leader in Related field	15 months
2.	Data Analyst (Three persons)	At least Bachelor's Degree in IT Related Field, preferable masters in IT related field	At least 5 projects experience in related field. After completion of Basic Degree	14.5 months
3.	Network Administrator (Three persons)	At least Bachelor's Degree in IT Related Field preferable masters in IT related field	At least 5 projects experience in related field. After completion of Basic Degree	14.5 months

Standard EOI Document

1	Key Experts			
S.N.	Position	Qualification	Experience	Input
4.	GIS Expert (Six persons)	Having BE in geomatic engineering or master's Degree with GIS included and studied in course or having PG diploma in GIS/RS after the completion of Bachelor's Degree.	At least 2 projects experience in related field after completion of relevant course. After completion of Basic Degree	14.5 months

2	Non-Key Experts			
S.N.	Position	Qualification	Experience	Input
1.	Computer Operator (Twenty Four persons)	At least Intermediate level with 6 months Computer training.	At least 2 years of relevant work experience in related field after completion of relevant course. After completion of Basic Degree	14.5 months

The consulting form must provide a letter of assurance that all the information on CVs submitted are true and truly signed by the respective professional himself/herself.

Job Descriptions:

Key Experts

1. Team Leader

- Lead the consulting team in the implementation of NeLIS and MeroKitta systems.
- Oversee the planning, coordination, and execution of all project activities.
- Liaise with the Survey Department and Survey Offices to ensure project alignment with objectives.
- Provide technical guidance and mentorship to team members.
- Monitor project progress, identify risks, and implement mitigation strategies.
- Ensure adherence to project timelines and deliverables.
- Prepare and submit project progress reports to the client.

2. Data Analysts

- Analyze existing cadastral data in survey offices and identify areas for improvement.
- Organize and clean data according to department standards and conventions.
- Utilize scripts and tools provided by the department for database cleaning and correction.

Standard EOI Document

- Verify the accuracy and integrity of cleaned data through rigorous quality checks.
- Coordinate with GIS experts for georeferencing and indexing of cadastral maps and documents.
- Prepare detailed reports documenting data cleaning procedures and outcomes.
- Collaborate with network administrators and GIS experts for seamless data migration.

3. Network Administrators

- Install and configure networking equipment, including routers, LAN switches, and networking components, in survey offices.
- Establish intranet connectivity between district offices and central servers.
- Configure database and application servers at the Survey Department and Government Integrated Data Center.
- Monitor network performance and troubleshoot technical issues as they arise.
- Ensure network security measures are implemented and maintained.
- Provide ongoing maintenance and support for network infrastructure.
- Prepare detailed floor plans and IP address assignments for network configurations.

4. GIS Experts

- Utilize GIS software for geospatial analysis and data processing.
- Assist data analysts in georeferencing cadastral maps and documents.
- Develop and implement scripts and tools for database cleaning and correction.
- Conduct topology checks and ensure data integrity in GIS databases.
- Collaborate with data analysts to optimize the Cadastral Data Migration tool.
- Provide training and technical support to survey office staff on GIS software and tools.
- Work closely with the team leader to ensure GIS activities align with project objectives and timelines.

Non-Key Experts

1. Computer Operator

- Assist in data cleaning and migration tasks under the supervision of key experts.
- Operate computer software and tools required for data processing and analysis.
- Follow departmental guidelines and standards for organizing and naming cadastral data files.
- Ensure the quality and completeness of scanned plot registers and fieldbook images.
- Index and arrange scanned images according to department conventions.
- Provide support during NeLIS installation and configuration on office computers

6 Period of Performance

The entire work is expected to be accomplished within 15 (Fifteen) months from the date of agreement. The consulting firm is required to develop the work schedule reflecting the tasks of each of experts to meet the target. The consulting firm is required to strictly follow

the timeline and go ahead into next milestone only after obtaining the approval from Survey department or Technical team.

7 Experience of the Consulting Firm:

- The Consulting Firm should have at least five projects experience in consulting service.
- The Consulting Firm should have at least two project in land administration (cadastral based data migration).

The Consulting Firm shall have following Software/equipment to accomplish the proposed assignment:

- GIS Software with Orthorectification and Spatial Analyst features
- Remote Sensing Software
- Large Size Color Scanner (A1)
- Vehicle (4-wheeler)

8 Time Schedule:

- Expected date of Agreement: 2081/03
- Expected date for commencement of consulting services: 2081/04
- Expected date of field work initiation: 2081/04
- Expected date of completion of data migration of first Seven survey offices: 2081/07
- Expected date of completion of data migration of next twelve survey offices: 2081/09
- Expected date of completion of data migration of next twelve survey offices: 2081/11
- Expected date of completion of data migration of next eighteen survey offices: 2082/02
- Expected date of completion of data migration of next eighteen survey offices: 2082/05
- Expected date of completion of data migration of remaining 5 survey offices and final completion of project and submission of final report: 2082/6
- Support period: 2083/01

9 Payment Schedule:

Payment shall made to the Consulting firm in the following manner:

1. 20% (Twenty Percent) of the contract price shall be paid after Supply of networking equipment for all Seventy-two survey offices.
2. 55% (Fifty Five Percent) of the contract price shall be paid upon completion of data migration in offices after completion of network configuration in same survey offices.
 - a. 5% after NeLIS implementation completion in first 7 survey offices (5% of contract price)
 - b. Next 10% after NeLIS implementation completion in next 12 survey offices (10% of contract price)
 - c. Next 10% after NeLIS implementation completion in next 12 survey offices (10% of contract price)
 - d. Next 15% after NeLIS implementation completion in next 18 survey offices (15% of contract price)
 - e. Final 15% after NeLIS implementation completion in next 18 survey offices (15% of contract price)
3. 25% (Twenty Five Percent) of the contract price shall be paid after NeLIS implementation completion in remaining 5 Survey offices and approval of final report by the client.

EOI Form 3: Experience (3(A) and 3(B))	
EOI Form 4: Capacity	
EOI Form 5: Qualification of Key Experts	

ii) EOI Evaluation Criteria				Insert Minimum Requirement if Applicable		Score [Out of 100%]	
A. Qualification (39%)							
Qualification and Experience of Key Experts						39	
S N	Team Composition	No s	Qualification (per expert)	Experience (per expert)	Total Marks (per expert)	Total marks	
1	Team Leader	1	1.8	4.2 (<i><5 projects = 0 marks, 5 projects =60%, 6 projects = 70%, 7 projects =80%, 8 projects =90% and 9 or more =100%) of total marks</i>)	6	6	
2	Data Analyst	3	0.9	2.1 (<i><5 projects = 0 marks, 5 projects =60%, 6 projects = 70%, 7 projects =80%, 8 projects =90% and 9 or more =100%) of total marks</i>)	3	9	
3	Network Administrator	3	0.9	2.1 (<i><5 projects = 0 marks, 5 projects =60%, 6 projects = 70%, 7 projects =80%, 8 projects =90% and 9 or more =100%) of total marks</i>)	3	9	
4	GIS Expert	6	0.75	1.75 (<i><2 projects = 0 marks, 2 projects =60%, 3 projects = 70%, 4 projects =80%, 5 projects =90% and 6 or more =100%) of total marks</i>)	2.5	15	
Total						39	
B. Experience [46%]						46	
1. General Experience of consulting firm- (<i><5 projects = 0 marks, 5 projects =60%, 6 projects = 70%, 7 projects =80%, 8 projects =90% and 9 or more =100%) of total marks</i>)						8	
2. Specific experience of consulting firm within last 7 years.						36	

Standard EOI Document

• 2 specific work experience (Cadastral based data migration)-22 • 3 specific work experience (Cadastral based data migration)-26 • 4 specific work experience (Cadastral based data migration)-31 • 5 or more specific work experience (Cadastral based data migration)-36	
3 Similar Geographical experience of consulting firm within last 7 years. (1 marks for 1 project. – maximum 2 projects will be evaluated)	2
C. Capacity (15%)	15
Financial Capacity (Average Annual Turnover of Best of 3 Fiscal Year Of Last 7 Fiscal Years) Minimum 500 Lakh	5
Availability of Software/equipment/ related to the proposed assignment	10
• GIS Software with Orthorectification and Spatial Analyst features	3
• Remote Sensing Software	3
• Vehicles (4 wheeler)	2
• Large Size Color Scanner (A1) Color Plotter (A1)	2

Note: In Case, a corruption case is being filed to Court against the Natural Person or Board of Director of the firm/institution /company or any partner of JV, such Natural Person or Board of Director of the firm/institution /company or any partner of JV such firm's or JV EOI shall be excluded from the evaluation, if public entity receives instruction from Government of Nepal.

Note:

- The Consulting firm shall submit updated signed Curriculum vitae of each proposed experts including their commitment of availability in the proposed project. Commitment letter must contain Signature, project name, mobile number and residential number for verification purpose. Curriculum vitae and commitment letter should be based on standard format. CV of Government Officials will not be entertained. Signature, academic qualifications and experience of the proposed manpower can be verified if the evaluation committee feels the submitted documents as doubtful.
- The Consulting firm should provide letters of experiences of general experiences from the client.
- EOI shall be evaluated on the basis of information duly provided by the Consultant. Information must be supported by relevant evidences such as academic qualification certificates, experience letters and training certificate.
- Experts having minimum academic qualification will be allocated 60% marks for qualification and having preferred degree will be allocated 100% marks for qualification. Evaluation shall be conducted on the basis of academic documents and experience documents submitted by the consulting firm. If proposed experts failed to meet minimum academic qualification requirement for respective position, marks for qualification and experience shall be zero. And if proposed experts failed to meet minimum experience requirement then marks for experience shall be zero. Correctness and completeness of the documents is sole responsibility of the consultant/expert.
- The consulting form must provide a letter of assurance that all the information on CVs submitted are true and truly signed by the respective professional himself/herself.
- The consulting firm must submit GIS and Remote Sensing Software license confirmation certificates, provider's official letter/or authorization letter, bills/vouchers, software licenses confirmation key and/or valid hiring letter (with valid bills, vouchers, software license confirmation certificates etc.) for proprietary software to get allocated mark mentioned in the evaluation criteria for GIS Software with Orthorectification, Spatial Analyst features and Remote sensing Software. Failing to provide required software documents for GIS and Remote Sensing Software will result zero score for that software/extensions. Bill/Vouchers without tax notification will not be entertained. For equipment purchased from outside the country, custom cleared documents must be associated. Further, regarding essential software, the consultants are required to provide compatibility with ArcGIS 9.x as previous cadastral data has been prepared in mdb format and remote sensing software as free sheet has to be georeferenced with satellite image. The consultant is essentially required to submit valid letter of possession or valid hiring letter for ensuring possession of GIS Software). This will justify to award full mark for that software. However, consultant having valid full time GIS Software with all necessary documents will secure full mark for GIS software.

Standard EOI Document

7. The consulting firm must submit the bills or valid hiring letter of the equipment (Vehicle and Plotter/Scanner as mentioned in evaluation criteria) (bills, vouchers, or ownership certificate and authorization certificate to sell/distribute/hire the proposed software/equipment etc).

Commitment letter of Key Experts/Other Experts to be involved in the proposed service (to be attached with CV):
